

Digital Twin Consulting Services

Transforming industries with tailored digital consulting solutions

Digital Twin's Consulting Services

Digital Twin Consulting is powered by industry experts passionate about disruptive technology. We believe technology should empower businesses, not the other way round. Understanding industry and business challenges combined with digital expertise leads to practical, implementable solutions, with a real return on investment.

Successful digital transformations require strong endorsement and involvement from Senior Management, which is why we collaborate with Executive Teams to craft and implement digital strategies that meet short, medium and long term objectives.

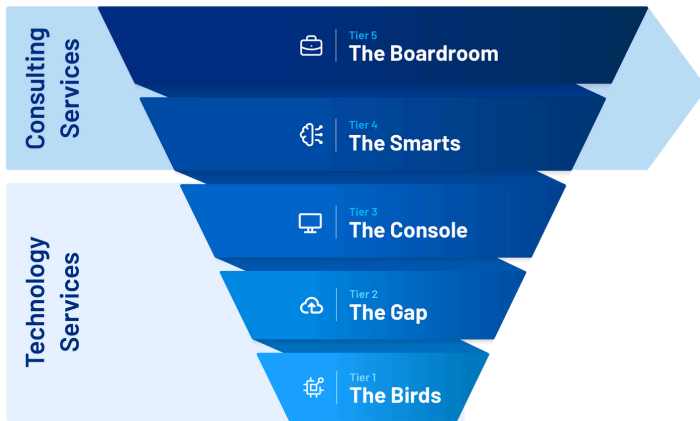

We have a strong focus on implementation and results, and recognise the significant change effort required to sustain the process. Our approach involves a controlled implementation with active Operations involvement, ensuring the best outcome. We value long-term relationships and partner with clients that recognise the efforts required to sustain the disruption of digital transformation.

Our Core Methodologies

 Digital Maturity Assessment	 Digital Strategy	 Digital Supply Chains
 Smart Operations	 Digital Energy Portfolio	 Automation for E-Commerce
 Enabled Safety, Health, and Compliance	 Digital Work Flow	 Integration with ERP
 Analytics	 Digitally Enabled Improvement Processes	 Project Management Office
 Change Management		

Our Engagement Model and Offerings

Digital Twin's Engagement Model

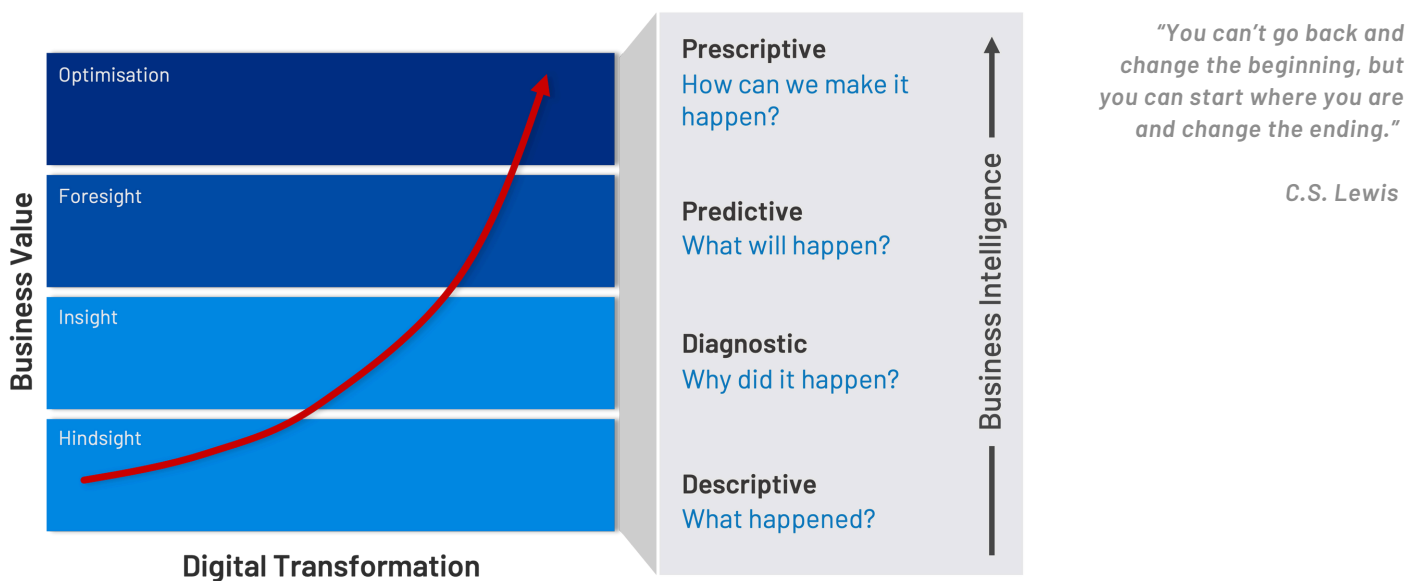

Consulting Service Offerings

Digital Twin Consulting leverages our in-house Technologies division in partnership with various fit-for-purpose solution providers to ensure that the latest available innovations are considered to solve industry specific opportunities.

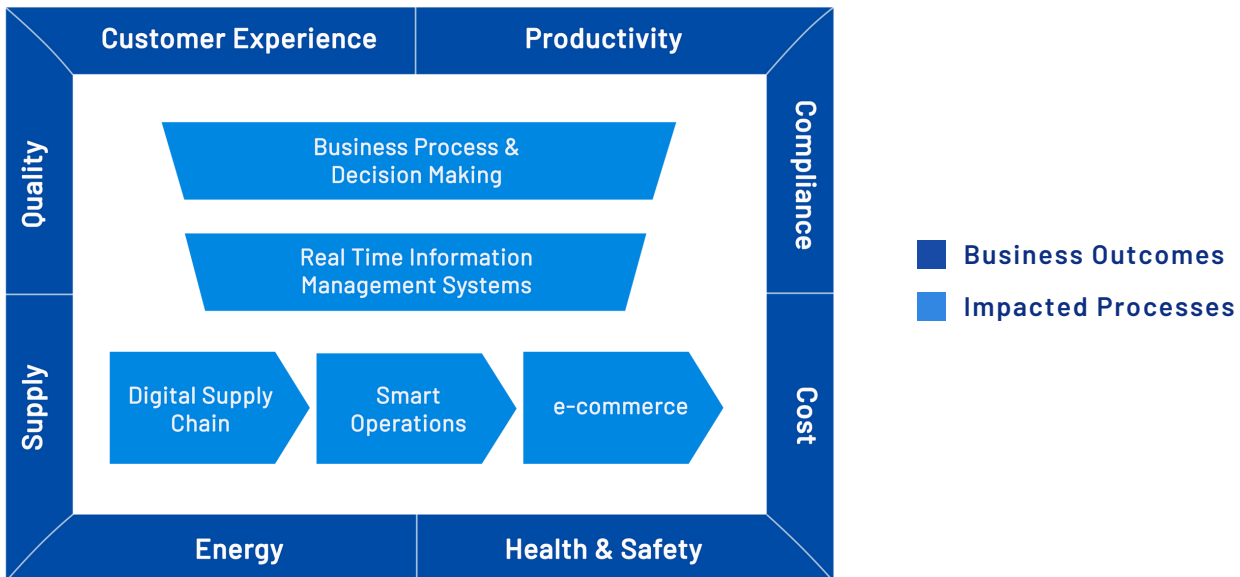

The Digital Twin Technologies team specialises in IIoT edge devices and sensors, Software as a Service (SaaS), and technical skills that assist in planning and designing an organisation's digital migration strategy.

Breaking down the hierarchical flow of data allows for real-time data across the value chain. We enable organisations to see beyond what was originally thought to be transparent information. Data visibility creates a new structure and culture across the business, driving better decision making at the source, ahead of critical failure.

Digital Twin's Business Value Framework

Why Choose Us?

Smart Tech with Proven ROI

We bridge smart technologies to industry specific focus areas in the most cost effective manner with proven ROI.

Tailored Advisory & Fulfillment

Our services are customized to your industry, ensuring co-created solutions that drive real results.

Partnered Approach

We're your partner throughout the journey, ensuring accountability and long-term success.

“Layering tech into a traditional manufacturing environment is exhilarating because you know you are going to see your world through a new lens, but finding the right partner that appreciates culture, has the emotional intelligence to leverage what has worked well and make it more dynamic is truly unique. The value we have been able to unlock together is so powerful!”

- Ed Colle, CEO of Belgotex, Client of Digital Twin Consulting
